Aneroid Sphygmomanometer

Operating Principle

It is measured by the cuff oppression to block the blood flow, and then through the discharge gas in the cuff, blood will flow again. The judgment of blood pressure measurement is based on the sound of second blood flow or the change of vibration on the blood vessel walls.

Feature:

- (1) It is a diagnosis instrument for measuring blood pressure in diagnostic equipment
- (2) Small volume, convenient to carry, use method and the effect is the same as the desktop mercury sphygmomanometer.
- (3) Simple operation, accurate measurement, total metal material, durable service. Whether at home or in the office, this machine is ideal for home practitioners and self-administering users.

Dual Head Stethoscope

Product components: chestpiece, standard tubing and earpiece

Application: Place the chestpiece upon the area to be examined, detecting sounds produced in the body and conveying to the ears of the listener through rubber tubing.

Features:

- Silver dual head chestpiece for adult, the membrane with diameter 48 mm is sensitive for sound collecting.
- The small bell-like chestpiece is used for auscultation of slight and low frequency sound.
- Considerate dual anti-chill ring design.
- Connecting spring is embedded, ear tip is specially designed for suiting the ear structure.
- Stainless steel chestpiece, excellent sound conduction, little acoustic attenuation.
